
High Tech Monitoring, Southern Hospitality

With all our technological excellence, the most important part of our service is our people. We understand that protecting your safety and possessions is serious business. We make it our job to respond promptly and courteously, no matter what the situation. At Cen-Signal, we'll go the extra mile to provide you with the level of service you deserve.

We're Listening...
and that's a promise.

We're Listening

You've made a smart decision by installing an alarm system in your home or business to protect you against burglary, fire and personal harm. But when the alarm goes off, can you be sure someone will respond to your emergency?

Quality Monitoring

Once your alarm system is installed, nothing is more important than quality monitoring. At Cen-Signal, we're here around the clock – every day of the year – to protect your investment. We'll work with your local alarm company to monitor your security system and provide on-the-spot response. Here's how.

When you choose Cen-Signal, your local alarm installer will connect a special digital communicator to your alarm and your existing telephone line. When your alarm system is tripped, the communicator instantly sends a signal to our central station computer over a toll-free WATS line. Within seconds, our state-of-the-art computer system displays all the necessary information. Then our specially-trained operators go to work. We notify the police, fire or medical response service you've previously designated – even friends or relatives.

Security For Your Business Security For Your Home

At Cen-Signal, we can help protect your business, your home and your family, no matter where you're located. We offer monitoring for:

- Fire
- Burglary
- Medical emergency
- Freezer alarms
- Two-way voice
- AlarmNet®
- Basic utility supervision, including electricity, high and low temperatures, and sprinkler system operation
- Opening and closing supervision
- Irregular openings
- General trouble monitoring for problems with any safety equipment

Response You Can Rely On

The best alarm system in the world is not effective if your monitoring company does not respond quickly and correctly. That's why we offer a level of quality that many monitoring services don't provide. In fact, we meet or exceed all Underwriters Laboratories certification standards. With Cen-Signal, you can rely on:

- **Fast, accurate response**

We use the latest computer and communications technology available to help us respond quickly and reduce the chance of error.

- **Full back-up**

All our systems have immediate back-up in case of equipment failure. A separate power supply assures you of uninterrupted service in the event of a power failure.

- **Quality monitoring standards**

We monitor and record every alarm signal transmission, as well as how we responded and how long it took.

- **Courteous, professional staff**

Our staff undergoes intensive training that not only focuses on fast, accurate response and technological skill, but on courteous service, as well. We are fully staffed in excess of Underwriters Laboratories standards at all times.
